TOWN OF CLINTON WATER DEPARTMENT

QUARTERLY LETTER OF WATER AVAILABILITY

Re: Town of Clinton, County of Hunterdon, State of New Jersey
Second Quarter 2015

The Town of Clinton Water Company offers the following Letter of Water as a planning tool that may be used by interested parties requesting information of water availability.

The following water availability calculation has been based on a firm capacity calculation as defined by the NJDEP in N.J.A.C. 7:10-11.6(a), using a peak daily demand as defined herein and prescribed under N.J.A.C. 7:10-11.4(a)(7).

Water Availability as of July 31, 2015: 21,457 gallons per day (GPD)

The above water availability determination is based on actual water system demand and supply conditions, and also incorporates all valid water reservations up to the date of this determination.

Future water system reservation applicants are cautioned that the water availability described herein is subject to variation, and this letter in no way represents a commitment to serve or a guarantee of allocation for a project at the time of application for water reservation.
